

## Stone Artifacts of Texas Indians

---

### Dart Points

---

#### ABASOLO

This large, unstemmed triangular point has a distinctive well-rounded base. The lateral edges may be beveled or steeply chipped, and the base is sometimes thinned. It is similar to *Catán* but larger in size.

**Distribution:** Common throughout south Texas, especially in the Rio Grande drainage, and continuing into northeast México. **Period:** Early to Middle Archaic. **Sites:** Choke Canyon; Oulline; La Perdida; Sierra de Tamaulipas, México
